

Scientific Figure Design Workshop Abstract

The Scientific Figure Design Workshop is a one-hour training that will improve your ability to create effective figures for scientific publications. Participants will learn essential figure formatting design principles, techniques, and tools with an interactive session to help you identify and illustrate the main points of your data story. The course is led by Simplified Science Publishing founder Karen Thiebes who has over 5 years experience leading professional development courses for scientists, engineers, corporate professionals, and biotech industries.
